SimFab Modular Flight Simulation Concept And Design Intent

SimFab offers wide range of dedicated and specialized flight simulation pits with high level of fidelity, realism and immersion. While all our pits, attachments and brackets are designed, replicating real aircrafts layout we take in consideration maximum comfort, modularity and full compatibility with all established brands and controls makers on the current market.

SimFab modular flight pit concept starts with several basic models covering the essentials at most affordable budget, without compromising in quality and craftsmanship.

Base models are suitable for flight sim pilots entering the air field of flight simulation and looking to give it a try at affordable cost. Each of our models has modular design, all upgradeable and interchangeable with one another, including sim racing setup.

Our base models are purposed for type of flight simulation as well as types of flight controls sharing similar attachment design.

SimFab introduces three base models as follows:

Civil aviation modular pit, **MSFS edition**.

Civil, combat and space sim modular pit, **hybrid edition**.

Combat sim modular flight pit, **DCS World edition**

DCS edition

For compatibility refer to flight sim add-on kit configuration #2

Hybrid edition

For compatibility refer to flight sim add-on kit configuration #1

MSFS edition

For compatibility refer to flight sim add-on kit configuration #5

Parts list

1. Arm rests (left and right)
2. Arm rest bracket set (2)
3. Arm rest bracket set mounting hardware (pre-mounted)
4. Arm rest brackets plastic cover
5. Adapter plates (2)
6. Mounting hardware:
 - Bolts (4)
 - Washers (8)
 - Lock washers (4)
 - Nuts (4)
7. Tools
 - 13mm combo wrench
 - 5mm Hex (Allen) key

Pre-installation check list and parts orientation

Lay out all parts and hardware and organize them by pairs and groups as per manual.

All parts are marked with left/right, top/bottom, rear/front orientation.

⚠ Ensure correct orientation is followed accordingly

Arm rest brackets installation

Remove pre-installed hardware.

Slide arm rest plastic cover to arm rest lower side.

Install left bracket to left arm and right bracket to right arm.

⚠ Arm rest brackets have reinforcement indentation which should match plastic cover shape. Use as point of reference pair of adjustment buttons on arm rest pad should be on the same side as bracket.

Tighten down all 4 bolts on both arm rest with included Allen wrench.

⚠ Do not over-tighten hardware to avoid stripping or irreversible damage

Seat lift kit and seat frame partial disassembly

Disassemble Seat frame and seat lift kit (spacers) one side at the time.
For frame and spacers disassembly instructions refer to the following link or scan QR code:

<https://bit.ly/liftkit-01>

⚠ Helper for the following steps is highly recommended.

Remove spacers lower side bolts (one side of racing seat at the time).

Gently slide seat rail all the way back. Loosen upper bolt and unscrew front spacer while holding upper bolt with wrench or finger tip.

⚠ Additional person holding seat slightly lifted up while removing spacer is recommended.

Slide seat all the way forward and repeat above steps for rear spacer.

After both spacers are removed, place front spacer approximately at center of frame tube and use it as a temporary seat support while preparing arm rest adapter plate.

Arm rest adapter plates installation

Have a helper lift up seat slightly on the same side being worked on.
Install adapter plate between seat rail and seat spacers with correct orientation as per sticker on each plate.

Tighten rear spacer and bolt to it same way as removal steps in reverse.

Repeat process at front side.

Install back lower side bolts. Ensure seat spacers are installed correct orientation according to top side angle cut.

Repeat process on the opposite side of seat.

Arm rest to adapter plate installation

Chose either set of mounting holes and mount arm rest to adapter plate. Ensure correct side arm rest is installed to left/right side accordingly as per arm rest indication beneath each pad.

Hand tight hardware with following order top to bottom:

bolt, washer (top side of plate)

washer, lock washer, nut (bottom side).

Adjust angle of arm rest to personal preference and pit setup.

Repeat process on the opposite side.

Arm rest pads 4-way adjustment

Arm rest pads have further adjustment on the go in four directions:

up/down

forward/backward

inward/outward

angle

Make final adjustments of adapter plate angle and arm rest pad and enjoy your fun time! We hope you like it!

Flight sim Add-on **configuration #1**, combat or commercial aviation flight sim HOTAS style, side by side mounted throttle and stick.

Brackets and adapter plates are compatible with the following brands and models flight sim controls:

1. Thrustmaster HOTAS T.Flight stick and throttle
2. Thrustmaster T16000M stick and throttle
3. Thrustmaster TCA AirBus
3. Logitech/Saitek X52, X52 Pro, X56
4. VKB Gladiator Stick
5. CH Products stick and throttle
6. Hori stick and throttle

Flight Sim add-on **configuration #6**, centered flight stick lower mount bracket.

Configuration #6 is a specially designed bracket for flight sticks with need of precise and long range of height adjustment. Lower mount bracket provides lowest height level of adjustment of stick base to accommodate flight sticks typically within configuration #2 with removable grips, where grip extension is added between standard grip and stick base. Major benefits are precise height placement of stick grip in accordance with various grip extensions for better stick control or when grip is used as helicopter simulation cyclic. Lower mount bracket can be used whether stick grip is used with extension or without.

⚠ Kit does not include adapter plates. Adapter plates are included in Configurations #1 and #2

Typically used (not limited to) with following flight sticks:

1. Thrustmaster Warthog stick
2. VirPil Sticks
3. VKB Gunfighter stick
4. WinWing Super Libra Stick

Proprietary design grip extension kit offering full range of grip extension from 2.75" (70mm) short to 7.5" (190mm) long. Package includes adapters, extensions, extension cables and all hardware, ready to use right out the box. All anodized and machined billet aluminum for light ,and yet strongest material.

Grip extension is compatible with the following stick grips:

1. All Thrustmaster Warthog based grips
2. VirPil stick grips
3. WinWing stick grips

Low frequency tactile transducer (bass shaker) universal bracket

Bring your racing sim experience to another level by adding a low frequency tactile transducer (bass shaker) to your SimFab rig. Bass shaker mount bracket is designed to provide universal fit for most bass shakers on the market such as all models Buttkicker, AuraSound or DaytonAudio or other brands.

Easy mount on either corner of seat frame.

Solid metal to metal connection for optimum vibration transfer.

Optional, install a pair of bass shakers for stereo effect on both sides of seat frame.

Optional, install shaker brackets at back of the frame. Install rolling wheels to shaker brackets.

**Flight Sim add-on configuration #3, centered stick
standard mount bracket. Requires either configuration #1 or
Configuration #2.**

Centered stick standard mount bracket provides quick and convenient conversion from racing wheel to flight stick by sharing same steering post. While config. #3 can be used in combination with either config. #1 or #3 we recommend it for #1 where stick base height adjustment is not necessary below knee level.

Flight Sim add-on **configuration #4**, rudder pedals plate.

Configuration #4 consists of dedicated rudder pedal plate and shaft connected to seat frame. Rudder pedals are optional for lower end flight sticks within configuration #1 family, with built in yaw movement by twisting flight stick grip. Rudder pedal plate is required with higher end flight controls within configuration #2 family where rudder pedals are used for yaw movement and ground braking. Rudder pedal plate is pre-drilled to accept all rudder pedals hard mounted. Included in the package is various mounting hardware compatible with the following rudder pedals:

1. Thrustmaster TFPR
2. Thrustmaster TPR
3. Logitech Pro Flight
4. CH Products
5. VirPil, MFG Crosswind
6. VKB
7. Slaw device

Flight Sim add-on **configuration #5**, general, civil and commercial aviation simulation package.

Configuration #5 consists of rudder pedal plate (config. #4), mounting brackets and adapter plates for various yokes and throttle quadrants. Our proprietary design of how controls are being mounted unifies adapter plates for all leading brands yokes and throttle quadrants with maximum rigidity and leg clearance.

Configuration #5 is compatible with the following yokes and throttle quadrants:

1. Honeycomb Alpha yoke and Bravo throttle quadrant
2. Turtle Beach Velocity One yoke and throttle quadrant
3. Logitech/Saitek yoke and single/dual throttle quadrant with optional Flight Velocity Trim Wheel
4. CH Products yoke and throttle quadrant

⚠ Thrustmaster TCA yoke and single/dual quadrant Boeing edition requires separate kit.
