Explore the Ultimate in Simulation with SimFab: Where Innovation Meets Immersion

At SimFab, we're redefining the world of simulation with our cutting-edge Modular Racing and Flight Sim Concepts and Designs.

Dive into an unparalleled realm of fidelity, realism, and immersion with our bespoke cockpits, meticulously crafted to mirror the intricate layouts of real aircraft and race cars.

We prioritize your comfort, offering modular, fully compatible setups that adapt seamlessly to all major brands and control makers. Starting with affordable yet uncompromised quality base models, our products cater to both novice pilots eager to explore flight simulation and seasoned racers seeking upgradeable, interchangeable designs for a tailored experience.

Join us on a journey where every detail is designed with precision, ensuring a simulation experience that's as thrilling as it is authentic.

SimFab introduces several base models as follows:

Combat sim modular flight cockpit, **DCS World edition**

General aviation modular flight cockpit, **Trainer edition**

Civil aviation modular cockpit, **MSFS edition**

Civil, combat and space sim modular cockpit, **Hybrid edition**

Civil or combat sim modular cockpit, **Rotor-craft edition**

The SimFab modular flight sim trainer station is a state-of-the-art training system designed to optimize cognitive memory and provide full compatibility with high-end flight simulation controls. It offers precise user adjustment options and the ability to hot swap between panels and controls for a customizable and efficient training experience.

DCS edition

Trainer edition

Base package combines several flight sim add-on modules. For compatibility refer to flight sim add-on kit configurations #2, #4, #6

MSFS edition

Base package combines several flight sim add-on modules. For compatibility refer to flight sim add-on kit configurations #4, #5

Hybrid edition

Base package combines several flight sim add-on modules. For compatibility refer to flight sim add-on kit configuration #1

DD sim racing conversion kit

Convert your flight sim pit to sim racing setup and hot swap between each setup in seconds

Requires Gen3 base chassis.

Modular flight pit add-ons Introduction

⚠ Please read introduction carefully in order to understand modular design concept and learn about available flight sim options (configurations).

We have incorporated simplicity, dynamic adjustment and rigidity, making your conversion effortless between different flight sim setups or sim racing, and vice versa. All controls are hard-mounted for maximum strength, handling the most aggressive pilot there is.

Our flight sim mounting brackets are compatible with all brands such as Thrustmaster, Saitek, CH Products, Logitech, VKB, WinWing, MFG, VirPil, Turtle Beach, Honeycomb, Slaw and others. We constantly update our designs, mounting patterns and hardware along with all newly introduced flight sim controls. For controls not mentioned within the list, please reach out to us for additional instructions or custom solutions.

We offer several flight sim add-on options based on commonly used and most desired setups, so called **"configurations"**. Order of configuration numbers is based on the time of which each was developed, where some options can be used independently such as configurations #1, #2, #5, #8 and rest configurations compliment the flight setup depending on controls being used.

All configurations are offered as "Add-on" kits as they require base model cockpit. Dedicated flight pits include group of said configuration as specified.

Flight sim Add-on **configuration #1**, combat or commercial aviation flight sim HOTAS style, side by side mounted throttle and stick.

Brackets and adapter plates are compatible with the following brands and models flight sim controls:

1. Logitech/Saitek X52, X52 Pro, X56
2. Thrustmaster T16000M stick and throttle
3. Thrustmaster HOTAS T.Flight stick and throttle
4. Thrustmaster TCA Airbus
5. Hori stick and throttle
6. CH Products stick and throttle
7. VKB Gladiator Stick
8. Turtle Beach Velocity One Stick

Flight Sim add-on **configuration #2**, combat aviation flight sim HOTAS style, side by side mounted throttle and stick.

Brackets and adapter plates are compatible with the following brands and models flight sim controls:

1. Thrustmaster Warthog stick and throttle
2. VirPil Sticks, throttles, control panels
3. WinWing stick bases and Orion throttle
4. VKB Gunfighter stick

ORDER

<https://bit.ly/simfabhotas>

Flight Sim add-on configuration #3, centered stick standard mount bracket. Requires either configuration #1 or Configuration #2.

Centered stick standard mount bracket provides quick and convenient conversion from racing wheel to flight stick by sharing same steering post. While config. #3 can be used in combination with either config. #1 or #3 we recommend it for #1 where stick base height adjustment is not necessary below knee level.

Configuration #1 + #3
Thrustmaster T.Flight

Configuration #3

Configuration #2 + #3
Thrustmaster Warthog

Flight Sim add-on configuration #4, rudder pedals plate.

Configuration #4 consists of dedicated rudder pedal plate and shaft connected to seat frame. Rudder pedals are optional for lower end flight sticks within configuration #1 family, with built in yaw movement by twisting flight stick grip. Rudder pedal plate is required with higher end flight controls within configuration #2 family where rudder pedals are used for yaw movement and ground braking. Rudder pedal plate is pre-drilled to accept all rudder pedals hard mounted. Included in the package is various mounting hardware compatible with the following rudder pedals:

1. VKB
2. MFG Crosswind
3. VirPil Ace Flight/Torq/WarBrd
4. Thrustmaster TPR/TFPR
4. Logitech Pro Flight
5. CH Products
6. Slaw device
7. WinWing Skywalker

ORDER

Flight Sim add-on **configuration #5**, civil and commercial aviation simulation package.

Configuration #5 consists of rudder pedal plate (config. #4), mounting brackets and adapter plates for various yokes and throttle quadrants. Our proprietary design of how controls are being mounted unifies adapter plates for all leading brands yokes and throttle quadrants with maximum rigidity and leg clearance.

Configuration #5 is compatible with the following yokes and throttle quadrants:

1. Honeycomb Alpha yoke and Bravo throttle quadrant
2. Turtle Beach Velocity One yoke and throttle quadrant
3. Logitech/Saitek yoke and single/dual throttle quadrant with optional Flight Velocity Trim Wheel
4. CH Products yoke and throttle quadrant

⚠ Thrustmaster TCA yoke and single/dual quadrant Boeing edition requires separate kit.

ORDER

<https://bit.ly/simfabcommers>

Flight Sim add-on **configuration #6**, centered flight stick lower mount bracket.

Configuration #6 is a specially designed bracket for flight sticks with need of precise and long range of height adjustment. Lower mount bracket provides lowest height level of adjustment of stick base to accommodate flight sticks typically within configuration #2 with removable grips, where grip extension is added between standard grip and stick base. Major benefits are precise height placement of stick grip in accordance with various grip extensions for better stick control or when grip is used as helicopter simulation cyclic. Lower mount bracket can be used whether stick grip is used with extension or without.

⚠ Kit does not include adapter plates. Adapter plates are included in Configurations #1 and #2

Typically used (not limited to) with following flight sticks:

1. Thrustmaster Warthog stick
2. VirPil Sticks
3. VKB Gunfighter stick
4. WinWing Super Libra Stick

Flight Sim add-on **configuration #7**, flight stick grip extension kit.

Proprietary design grip extension kit offering full range of grip extension from 2.75" (70mm) short to 7.5" (190mm) long. Package includes adapters, extensions, extension cables and all hardware, ready to use right out the box. All anodized and machined billet aluminum for light, and yet strongest material.

Grip extension is compatible with the following stick grips:

1. All Thrustmaster Warthog based grips
2. VirPil stick grips
3. WinWing stick grips

Parts list

1. Side main rail
2. T-extension bar (2)
3. Lower L bracket
4. Upper L bracket
5. 4way coupler (2)
6. Medium size universal adapter plate
7. Hardware
 - A. Large quick release knobs (4)
 - B. Small quick release knobs (4)
 - C. M10x12mm set screws (10)
 - D. Felt pads (2)
 - E. Cable management tie wraps (6)
 - F. M5x12mm (4) countersink bolts for: VirPil, WinWing controls and others
 - G. M6x20mm (4), M6 fender washers (4) for Thrustmaster controls
 - H. Plate to upper L bracket mounting hardware

M6x50mm bolts (2), washers (2), lock washers (2), nuts (2)

Required tools included in base package SimFab cockpit, not included in this kit

1. 17mm open wrench
2. 10mm open wrench
3. 8mm Allen key
3. 5mm Allen key
5. 4mm Allen key
6. 3mm Allen key
7. 2.5mm Allen key

Installation

Installation bellow shows left hand side installation. Right hand side is similar.

1. Hardware pre-intsallation by hand.

1.1. Pry out seat frame right side end caps and replace bolts with small knobs located on top welded nuts.

⚠ Adjacent side bolt is not necessary.

⚠ Optionally substitute knobs with set screws in bag C.

1.2. Stick felt pads to bottom/center surface

1.3. Install small knobs to top welded nuts of T-extension bars, small knobs to lower and upper sides of upright post, large knobs to post front welded nuts. ⚠ Optionally substitute knobs with set screws in bag C.

2. Slide parts to side rail in the following order:

1: T-extension, 2: 4way coupler, 3: T-extension, 4: 4way coupler.

⚠ 4way couplers can be installed on the inside or outside of T extensions depending on personal preference and controls distance.

3. Installation and alignment of side rail assembly.

A. Slide T-extensions to seat frame.

B. Align side rail tube rear end cap with edge of rear T-extension. Adjust front 4way coupler next to front T-extension.

C. Measure equal distance at front and rear T-extensions and ensure parallel relation between side rail and seat frame.

D. Tighten down knobs on T-extensions to side rails.

E. Tighten down pair of set screws on front 4way coupler to side rail.

⚠ Leave all rest hardware loosen, detach side assembly from seat frame, and continue with assemblies on it.

4. Slide lower L brackets all the way into 4way couplers and tighten both pairs of set screws securing L brackets to couplers.

⚠ Lower L bracket can be install with horizontal arms pointing in or out in reference to seat. Depending on height adjustment either short or long arm can be installed vertically. Default option is shorter arm mounted horizontally, into 4way couplers and longer arm pointing up.

5. Install control to plate, plate to upper L bracket, upper L bracket to lower L bracket.

⚠ For VirPil controls, run pair of countersink bolts connecting plate to upper L bracket through pair of plate holes and then install control on top.

Mount front 4way coupler between T-extensions. Add 2nd knob to rear L bracket holding VirPil control panel. Adjust plates close to each other. Refer to assembly manual configuration #2 for mounting VirPil controls to plates.

⚠ Do not over tighten controls mounting bolts to avoid stripping controls insert riv-nuts.

Controls mount pattern:

6. Install Stick with its dedicated adapter plate and upper L bracket to front lower L bracket. Make final adjustments, ensure all hardware and knobs are tight. Enjoy your air battle!

18. Use included Velcro tie wraps to manage cables neatly around tubes and out of the way.

19. To break down, store away or move your SimFab flight pit, disconnect each peripheral modules/attached brackets at easiest breaking points as shown.

Specifications:

Recliner: max: 170 degrees

Construction: tubular steel frame with elastic strap supports

Seat Materials: high-density cold cure foam filling; Fabric, Steel chassis

Instructions during use and care:

Move simulator around with caution to avoid collision.

Keep out of direct sunlight and outdoor use.

Watch fingers when adjusting recliner.

Placing heavy or sharp objects on the seat may damage the surface material.

Do not use abrasive or chemically aggressive materials on the seat.

Use dry cloth or soft brush to clean the chair.
